

REF XYL-18S2-100, XYL-18S2-10

Rapid Response® Xylazine Test Strip 2.0

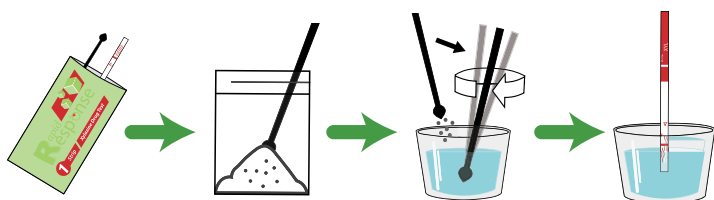

(Liquid / Powder) With Microscopes!

The Rapid Response® Xylazine Test Strip (Liquid / Powder) is an easy-to-use rapid lateral flow assay for the qualitative detection of xylazine in liquid or powder dope samples. **The latest update to the Rapid Response® Xylazine Test Strip can be used to test cocaine samples, and has shown no cross reactivity with lidocaine.**

Microscopes Included in Every Pouch

To increase usability and consistency while also decreasing the assembly burden for distribution programs every pouch now includes both a Xylazine test strip and a 5-10mg microscope.

Product Details

- Detects Xylazine in concentrations above 1000 ng/mL
- Results interpretation guide printed on each pouch
- Built-in procedural control
- Results in 60 seconds
- Compact format for easy distribution

Kit Contents

- Individually packaged test strips + microscopes
- Product insert
- Results interpretation card

Features

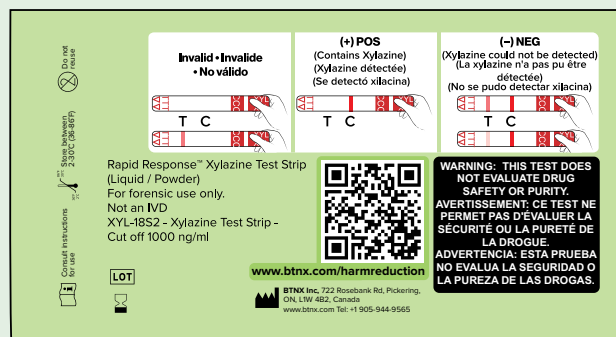

Highlights

- **Small sample requirement of only 5-10 mg**
- **No cross reaction with lidocaine:** the test can now be used to test cocaine samples
- **Results in 60 seconds**
- **Microscopes included in every pouch for easy sampling**
- **Improved User Guidance:** Every pouch features a QR code linking it to the BTNX Harm Reduction Resource Page - giving every user access to written and video instructions.
- **Results Interpretation:** Results interpretation printed on the back of every pouch and T's and C's printed on each strip to indicate the orientation of the Test and Control lines.

Testing Procedure

Step 1 Option 1: Preparing Powder or Pill Samples

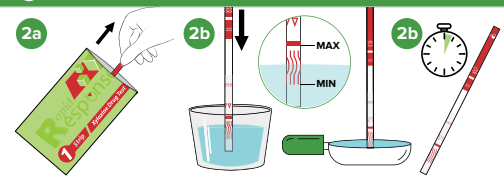

- Add 5mL of water to a clean container.
- Mix the drugs thoroughly before testing.
- Mix the drugs with water. Open the pouch and remove the microscop. Using the microscop, collect one scoop of the powdered drug. Add it to the water. Stir with the microscop until the drug is dissolved in the water.

Step 1 Option 2: Preparing Liquid Drug Residue Samples

- After the drug shot is prepared and taken into the syringe, the leftover residue can be tested. Add 1mL of clean water to the container or cooker having the residue.

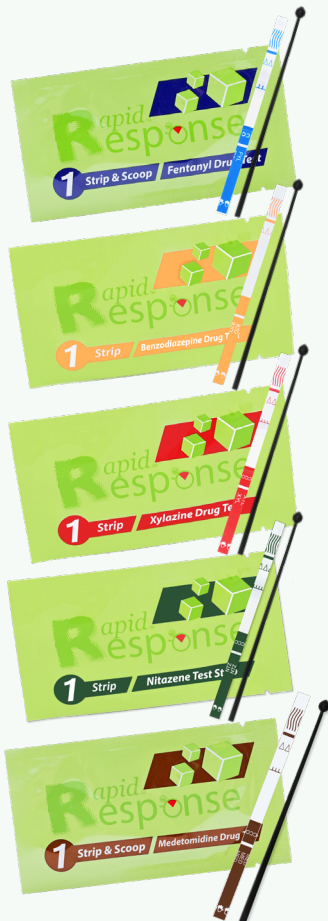

Step 2: Testing

- Remove the test strip from the pouch.
- Dip the strip into the solution, up to the wavy lines but not past the solid line, for 10-15 seconds.
- Remove the strip from the solution and place it on a non-absorbent flat surface. Start the timer. Wait for the colored line(s) to appear.

For illustrative purposes only. Refer to product insert for the full instructions for use.
